

IF YOU WERE AN ENGINEER – WHAT WOULD YOU DO?

South of England, Year 4 Award Winner

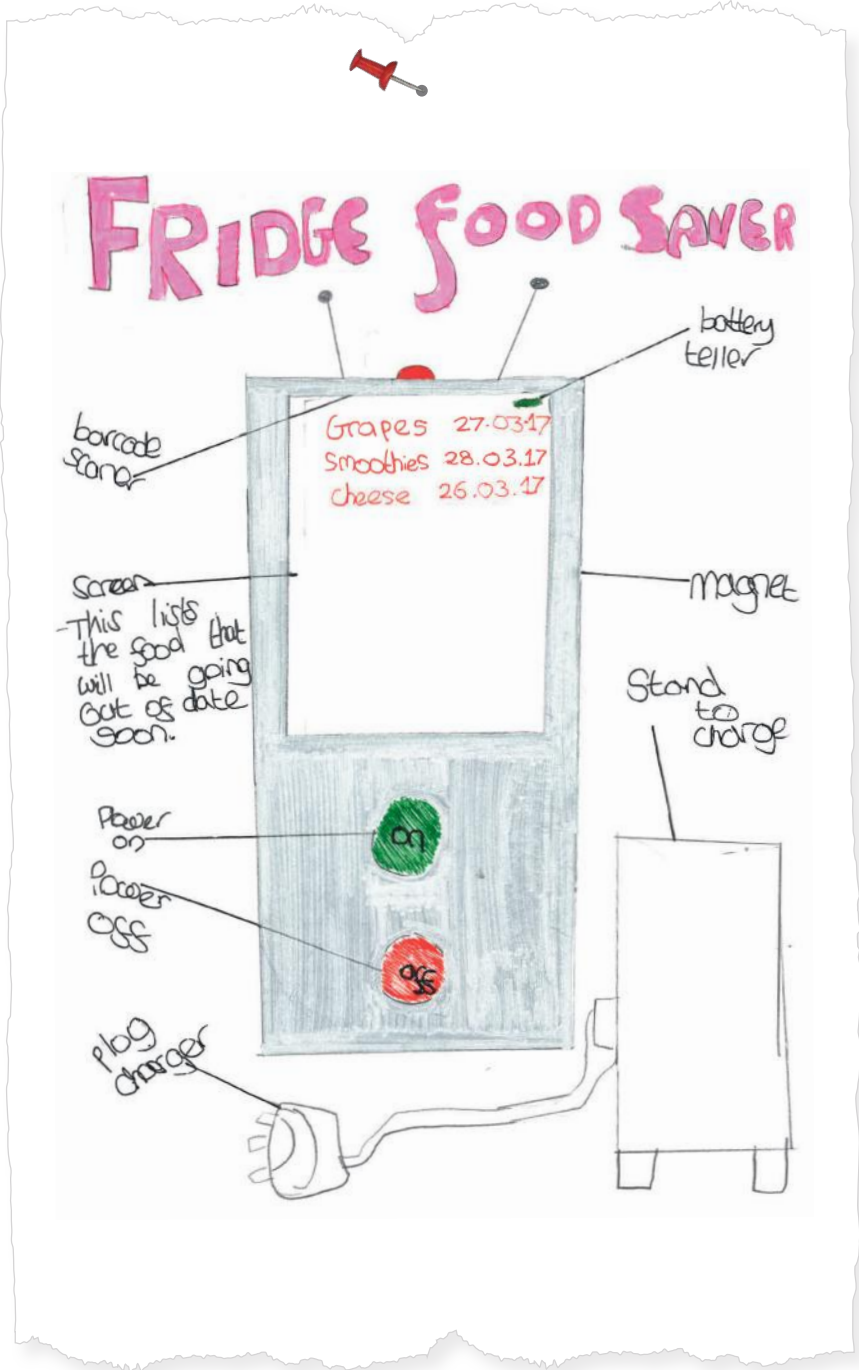

Name:
 Neve Jeffery

Gender:
 Female

School Name:
 West Town Lane Academy

Year Group:
 Year 4

The problem that my invention solves is food wastage and throwing away food that hasn't actually been used, yes, I thought this was a problem because the other day we wasted something that wasn't even open. The invention works by there's a magnet so you can hook it on to your fridge and you scan the food before putting it in your fridge. The people who benefit the invention is everyone. My invention should be built as a prototype because it could help people not waste food to save money and cut down on food wastage. My solution is special because it hasn't been made yet. The thing that was my inspiration to invent the solution was seeing food being thrown away. The area of engineering I utilised was mechanical and electronic.
